Culvert Application

The City requires that vehicle access to all parcels of land within the City be over a culvert and gravel driveway unless deemed unnecessary by the City. A permit is required for construction, repair or reconstruction of any driveway or installation of any culvert within the City right-of-way. Application for a permit shall be made at least 5 business days in advance of the intended installation. No driveway permits shall be issued for private easements that provide access to land locked parcels.

All culverts are recommended to be 15 inches in diameter or larger as specified by the City and shall meet the following criteria:

Limits~

Maximum Driveway width:

Residential—24 ft at right of way
 other- 30 ft
 all - 20 ft

Minimum Culvert width:

all - 20 ft

Minimum required distance:

From culvert end (end of end section) to property line (P.L.) or City easement line - 5 ft

Minimum distance between culvert ends - 6 ft

Application Instructions:

1. Complete the Culvert Permit Application form on the reverse side by printing or typing all of information required. The Remarks blank may be used for indicating any special conditions that may affect the culvert installation. The normal residential length is the 20 foot minimum required by the City. The maximum residential length is 24 feet. Please indicate if the preferred driveway location has been staked in the field (preferred) and shown on the plot plan.
2. Attach a copy of a plot plan for the property that includes elevations and a benchmark that is within sight distance of the proposed culvert.
3. Indicate the proposed location of the driveway. This may either be shown by dimensions from one of the side lot lines on the plot plan and/or indicated on the property by a stake driven in the ditch line at the centerline of the proposed driveway.
4. Submit the material indicated above to the City with the required fee of \$150.00, which covers application processing and two site inspections.
5. The City staff will call when the first site inspection has been made and the culvert permit is issued. (At that time a house number will be assigned to any property under new construction.) Take the permit to your contractor. When the culvert installation is complete, you or your contractor should notify the City so that the second inspection may be made. The process is complete when the City staff has signed the second inspection report or The City of Pewaukee has installed the culvert.
6. Installation Costs: Material, Labor and Equipment Costs

****Please complete the application form****
